

UPPAbaby MESA.

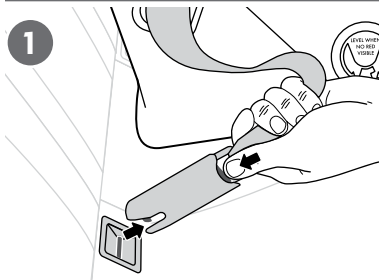

QUESTION: What do I do if there is a gap between the top of my base and my vehicle seat back or a wedge where my vehicle seat back and cushion meet?

WHAT IS A WATERFALL?

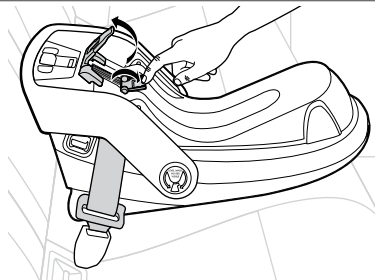

Many late model vehicles have what industry professionals call a waterfall. A waterfall is the wedge of material where your vehicle seat cushion and seat back meet. In some cases, this may interfere with the leveling foot on your UPPAbaby MESA, preventing it from 'sitting' properly in the crease of the vehicle seat.

This is an easy issue to resolve by following the steps below:

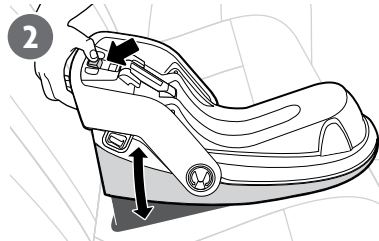

LATCH REMOVAL

OR

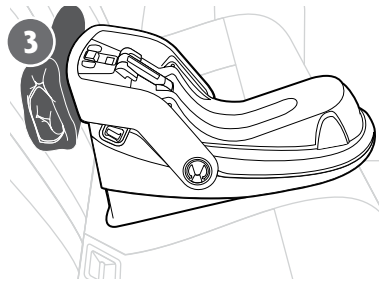

VEHICLE BELT REMOVAL

- 1 Uninstall your MESA base by pushing the red buttons on the mini connectors (if using LATCH) or by unbuckling the vehicle belt and opening the lock-off door located on the top of the base. Resituate the base back towards the vehicle seat back.

- 2 Adjust the recline foot to achieve proper recline level.

NOTE: Your recline indicator dial is located on either side of the MESA base. It MUST be all green. To adjust the foot and recline angle, push the grey button between the two orange buttons on top of the base and lift upward to extend the recline foot.

- 3 Push the base into the seat back. If there is a gap present between the top of the MESA base and the back of the vehicle seat, please do the following:

- A Grab a hand towel from your bathroom.
- B Fold it vertically and roll it lengthwise.
- C Place towel in gap flush with the top of the base.

- 4 Install the MESA per manufacturer's instructions.

SAFETY CHECK

- 1 Confirm that the recline indicator wheel is still fully green
- 2 Check that the Tension Indicator on the top of base is fully green
- 3 Grab the base at the belt path near the point of installation and attempt to move back and forth and front to back. You should experience no more than 1" movement at the belt path.
- 4 Make sure the front of the MESA base is making contact with the vehicle cushion and is not hovering above the vehicle seat. If the front of the base is hovering, please reinstall utilizing a bulkier towel (Step 3).
